Foreign Agricultural Service

Approved by The World Food and Agricultural Outlook and Situation Board

WASDE-115

April 10, 1981

HIGHLIGHTS

Global Grain and Soybean Stocks Revised Upward; U.S. Cotton Stocks Trimmed

Estimates of Southern Hemisphere grain supplies are forecast slightly higher than last month, with further increases in corn production indicated for South Africa and Argentina. Most of the increase will likely be added to 1980/81 carryover stocks.

Global grain stocks are forecast about 3 percent above a month ago, but carryover stocks are expected to decline nearly one-fifth, mainly due to a forecast drop of more than 50 percent in U.S. coarse grain stocks. World wheat stocks still are expected to be reduced slightly more than one-tenth during 1980/81, while rice stocks may be up about one-tenth.

Domestic and international demand for U.S. soybeans and products has been weak in recent months. It now appears that total use for 1980/81 will be below last month's projection. Despite this reduction, U.S. soybean stocks next September are still expected to be reduced around one-fourth. Recent lower-than-expected prices have resulted in slightly reduced estimates of season-average prices for corn and soybeans; both are expected to benefit from tightening supplies relative to use in coming months.

Global cotton consumption and trade estimates are slightly higher than a month ago, primarily due to an upward revision for China's needs. Larger prospective U.S. exports more than offset lower indicated domestic use, and U.S. cotton stocks on August 1 are expected to be at a minimal level.

Larger Southern Hemisphere Coarse Grain Crops in Prospect

Continued favorable weather in major southern Hemisphere exporting countries, combined with upward adjustments in area, account for the 2-1/2 million ton increase since last month in the estimate of 1980/81 foreign coarse grain production. Major exporters' production for 1980/81 is now expected to total 65.5 million tons, nearly 15 million above the 1979/80 level. With larger supplies in these countries, marketing year exports may expand by more than one-third from last year's level.

Most of the additional foreign production will likely go into carryover stocks as forecast total world consumption for 1980/81 is largely unchanged at

1/ Aggregate of differing marketing years. 2/ Includes wheat, coarse grains, and milled rice. 3/ Based on export estimates, see individual commodity table for treatment of export/import imbalances.

746 million tons. Total 1980/81 world carryover stocks of around 62 million tons are up nearly 4 million since last month's forecast, 26 million below the 1979/80 level.

The U.S. corn price forecast has been lowered slightly to a range of \$3.15-\$3.30 per bushel. Prices for the first 6 months of the marketing year have averaged around \$3.15 per bushel, somewhat below earlier expectations.

U.S. Farmer-Owned Wheat Reserve Estimate Increased

Large placements of wheat into the farmer-owned reserve in the past few weeks have boosted the quantity in reserve to 9.6 million tons (353 million bushels). The reserve is expected to reach 10.9 million tons (400 million bushels) by June 1, 1.4 million (50 million bushels) above last month's forecast. Reserve quantities, including CCC inventory, will represent nearly two-thirds of the total carryover stocks of 24.7 million tons (909 million bushels) forecast for June 1.

World supply-use estimates are largely unchanged from last month. Total 1980/81 foreign production of 377 million tons is up 3-1/2 percent from the 1979/80. World consumption is expected to be up about 1 percent from 1979/80 and may exceed world production by about 9 million tons. The carryover stock level of 69 million tons would be the lowest since 1975/76.

World Rice Outlook Unchanged

Foreign rice production in 1980/81 is forecast at 262 million tons (milled basis), unchanged from last month's forecast, but 5 percent above the 1979/80 harvest. Since last month, slight increases in production estimates for major exporters and importers were offset by declines in other countries, primarily Vietnam. Worldwide rice consumption in 1980/81 is expected to be up about 2 percent from 1979/80, but will still likely fall short of production. The 1980/81 carryover stock estimate of 26 million tons is up 1 million from last month, and about 3 million above 1979/80. Most of the stock buildup this year is occurring in India, and several other Asian countries.

No changes were made in the U.S. supply-use estimates.

Demand for Soybeans and Products Continues to Show Weakness

Use of soybeans and soybean products in early 1981 continues to lag earlier expectations. U.S. soybean meal usage was off by nearly 15 percent in the January to March quarter and was down by 8 percent from last year's level in the first half of the marketing year. A mild U.S. winter and reduced profitability in U.S. livestock and poultry feeding have contributed to the downturn in meal use. For the year U.S. soybean meal usage is now estimated at 16.6 million metric tons, down .4 million from last month's forecast. Soybean meal usage has also slipped in Western Europe and Japan as livestock

feeding margins remain low. Increased availabilities of rapeseed meal and corn gluten feeds in Europe are also cutting into soybean meal consumption. Consequently, the U.S. soybean export forecast for 1980/81 has been reduced by 25 million bushels to 760 million bushels.

Soybean oil demand and use also continue to lag. U.S. disappearance in the first two quarters was off by 4 percent from year-earlier levels. For the full year, usage is forecast to rise by 1 to 2 percent, a downward revision from the 3 percent forecast in March. An anticipated rise in usage in the last half of the marketing year is based on soybean oil prices continuing below year earlier levels and some easing in interest rates. In major foreign markets for U.S. soybean oil, ample supplies of oils and fats and soybean oil from other export origins are offering keen competition. U.S. soybean oil exports to key markets such as India are lagging year-earlier levels; thus the U.S. soybean oil export forecast has been lowered by about 100,000 tons since March.

Producer prices in the United States for soybeans may recover some from March levels but larger estimated stocks will continue to blunt price rises in the rest of this marketing year. Soybean farm prices for all of 1980/81 are forecast to average \$277 per metric ton (\$7.55 per bushel) down \$4 per ton from the March forecast.

World Cotton Trade Prospects Strengthen; U.S. Exports Increased

Global cotton exports in 1980/81 are estimated at 20.1 million bales--2 percent above last month's projection--primarily reflecting stronger import demand by China, Taiwan, and Japan. Larger consumption also is likely in these countries, boosting world use to an estimated 65.9 million bales, up 0.3 million from a month earlier. With production unchanged at 65.2 million bales, ending stocks this summer are placed at 21.4 million, down from the revised beginning level of 21.9 million.

Foreign ending stocks are projected at 18.9 million bales, unchanged from the beginning level. A major revision has been made in Chinese consumption, now expected to total 15.2 million bales, up 0.5 million from last month. Chinese imports during 1980/81 also were raised 0.2 million bales to 3.2 million.

With larger world trade and recent brisk U.S. export movement, the U.S. cotton export estimate for 1980/81 has been increased 0.3 million bales to 6 million, which matches the current outstanding sales plus shipments to date. Recent weak domestic textile activity has prompted a 0.1 million bale reduction in prospective mill use to 5.8 million. Consequently, this season's ending stocks now are expected to total about 2-1/2 million bales, down from 3 million at the beginning of the season, and the lowest level since August 1951.

Plantings of Major U.S. Crops

Based on the March 19 Prospective Plantings report, U.S. farmers are expected to expand 1981 crop plantings by nearly 2-1/2 percent, primarily reflecting an increase of 8 percent in total wheat area. Top soil moisture improved in most areas during March, aiding early season growth. Subsoil moisture supplies, however, are still short in many areas, and 1981 crop potential depends critically on timely rainfall during the planting and growing season.

1/ Marketing year beginning Aug. 1. 2/ The "probable variability" reflects the root mean square error and/or standard error of estimate from trend and judgment. Chances are about 2 out of 3 that the outcome will fall within the indicated ranges. 3/ Based on Bureau of the Census data. 4/ Includes imports. 5/ Difference between ending stocks based on Bureau of Census data and preceding season's supply less distribution. 6/ Season average farm price, domestic measure, cents per pound; metric measure, dollars per kilogram. 7/ Weighted average cotton price for the first 5 months of the season; not a projection for 1980/81. Note: Totals may not add due to rounding.

The World Agricultural Supply and Demand Estimates were approved by
the Interagency Commodity Estimates Committees for:

FEED GRAINS: Paul Meyers, Chairman, WFAOSB; Jim Rudbeck, FAS;
Orville I. Overboe, ASCS; Ralph Tapp, AMS; Bruce Wright, ESS.

WHEAT: Paul Meyers, Chairman, WFAOSB; Larry Hall, FAS; David
Spalding, AMS; Randell Weber, ASCS; Bruce Wright, ESS.

RICE: Paul Meyers, Chairman, WFAOSB; Frank Gomme, FAS; Jack Ross
AMS; George Schaefer, ASCS; Bruce Wright, ESS.

SOYBEANS, COTTONSEED AND OILS: Jim L. Matthews, Chairman, WFAOSB;
Alan E. Holz, FAS; Bruce Wright, ESS; David Spalding, AMS; Louise
Lynch, ASCS.

COTTON: Russell G. Barlowe, Chairman, WFAOSB; Charles V.
Cunningham, ASCS; Donald Bratton, AMS; R. Samuel Evans, ESS; Gordon
H. Lloyd, FAS.

The World Agricultural Supply and Demand Estimates report draws on
information from USDA's global network of agricultural attaches,
commodity analysts, and country regional specialists. In addition
to the ICEC committee designates, principal contributors to this
issue include:

<u>ASCS</u>	<u>FAS</u>	<u>WFAOSB</u>	<u>ESS</u>
Carol Skelly	Cleveland Marsh	Terry N. Barr	Sally Byrne
	James O'Mara	James R. Donald	Jan Lipson
	Shackford Pitcher		David Young
	Frank Tarrant		
	Henry Wagly		

CONVERSION FACTORS

Bushels to metric tons	480-lb. bales to metric tons
Wheat & soybeans = bushels x .027216	Cotton = bales x .217727
Barley = bushels x .021772	Cwt. to metric tons
Corn, sorghum, rye = bushels x .025401	Rice = cwt. x .045359
Oats = bushels x .014515	Kilogram = 2.204622 pounds
1 hectare = 2.471044 acres
